ADVENT CALENDAR 2026

Your Christmas takes shape

A little guide to turn your calendar surprises into candles, trees, soaps and home fragrances.

WARNING: For adult use only. Not suitable for children.

Inspiration and instructions to keep creating after Christmas.

CREATE • EXPERIMENT • SCENT

eshop-candlelx.com

01 YOUR SCENTED CANDLES

50 g

of wax per candle

2.5 ml

about 125 drops
of fragrance

3-4

colour beads
per candle

Prepare: a small saucepan or a container for a water bath, a thermometer, a kitchen scale and a mixing utensil. Use the included jar, wick and adhesive pad.

1 Secure the wick. The jar must be clean, dry and intact. Stick the wick base in the centre with the pad and keep it upright.

2 Melt and colour at 85 °C. Heat 50 g of wax in the melter or a water bath, without letting water enter the wax. At 85 °C add 3-4 colour beads, according to the desired intensity, and mix until dissolved.

3 Fragrance at about 65 °C. Remove from the heat and allow to cool. Add 2.5 ml of fragrance per candle (about 125 drops) and mix thoroughly.

4 Pour at about 65 °C. Warm the jar and slowly pour in the wax. Keep the wick centred and allow to cool completely without moving the container.

Wax proportions: fragrance 1-6% (0.5-3 g per 50 g). The practical 2.5 ml dose varies by fragrance from about 1-6%. For a more delicate scent, use 50 fewer drops.

8 candles, many combinations. The 400 g of wax makes 8 doses of 50 g. Reuse the 4 jars after emptying and cleaning them, with a new wick each time. Choose Vanilla, Chocolate, Spiced Bread and Cinnamon.

Before lighting: wait until the candle has cooled completely. Never leave it burning unattended; keep it away from drafts and flammable materials, on a heat-resistant surface.

More ideas to create

02 Plaster trees

FOR ONE TREE · 50 g of plaster + 13.5 ml of water

1. Measure 13.5 ml of water. To colour, dissolve the pigment in the water first and mix well.
2. Gradually add 50 g of plaster and stir gently.
3. Pour into the mould and tap it to release air bubbles.
4. Remove from the mould once hardened and allow to dry completely.

Proportions: 100 ml of water per 370 g of plaster. Pigments: pink, green, blue and yellow: 5-6% of plaster weight, i.e. 2.5-3 g per 50 g. Use less for delicate shades. Do not use these pigments in candles.

With 200 g you can make 4 trees. Do not pour plaster down the drain.

03 Snowflake soaps

USE THE BASE · 90-100 g of soap

1. Cut the base and melt gently in a water bath, without boiling or adding water.
2. Add a few drops of white soap colour and mix.
3. Add the Snow and Macadamia soap fragrance.
4. Pour into the mould and allow to cool and harden before removing.

Fragrance: 0.05-1% of the base weight. For 90 g: 0.045-0.90 g; for 100 g: 0.05-1 g. For this project, stay below 1%. Use only soap fragrance. White colour: a few drops, increased gradually. Percentages are by weight, not in ml.

04 Your rose diffuser

ROSE RD · 150 ml + 5 reeds at a time

Use the included plastic bottle directly: remove the cap and insert 5 reeds at a time. Keep the other 5 for a later replacement. The liquid is ready to use. Keep the bottle upright on a stable surface, away from heat. Follow the label instructions.

KEEP CREATING AFTER CHRISTMAS

Reuse the moulds and clean, intact jars. Any leftover colour for candles, plaster or soap, and fragrances: keep them in their original, tightly closed containers, following the labels. For new supplies of wax, plaster, soap and wicks: eshop-candelx.com.
