

WAX MELTER - 70 LITRE CAPACITY

Double-wall AISI 304 stainless steel - Thermostatically controlled electric heating 30-120 °C

DESCRIPTION

Professional wax melter with a nominal capacity of 70 litres, made of double-wall AISI 304 stainless steel and fitted with external thermal insulation. Heating is electric and thermostatically controlled, with manual temperature adjustment from 30 to 120 °C.

Indirect heating is provided by water in the jacket. The melter quickly liquefies wax and keeps it ready for subsequent processing, including the production of wax foundation sheets and candles.

Supplied with painted metal support, taps and lid. By using suitable heat-transfer oil in the jacket instead of water, the unit can be used for thermal treatment of wax at higher temperatures, in accordance with the manufacturer's instructions and safety requirements.

Article reference: Art. 7411

TECHNICAL DATA

Characteristic	Value
Construction	AISI 304 stainless steel
Internal diameter	350 mm
External diameter	470 mm
Internal height	650 mm
External height	750 mm
Nominal capacity	70 L
Heat-transfer oil capacity	50 L
Temperature adjustment range	30-120 °C
Power consumption	2000 W
Taps	Ø 1"
Weight	28 kg
Heat protection	Polyethylene
